For over 30 years, EMS providers have relied on printed protocols, which led to crucial time being wasted searching for critical information. Some switched to PDFs on mobile devices, but these documents still require keyword searches and constant zooming to read the text, making them cumbersome.

The EMS Protocols To-Go app solves this problem by offering instant, mobile-friendly access to protocols on both iPhone and Android. With the text search feature and a unique tag system, finding protocols is quick and easy.

For example, simply search "STEMI" to instantly access all related protocols instead of seeing over 50 keywords related to "STEMI" in a PDF. This feature significantly streamlines the entire process.
